

Randall Road Wetland Enhancements

Project Information

This project will improve the existing wetland complex between Randall Road and Stonegate Road. The project involves the installation of a berm and water control structure to enhance upland water features. The addition of these amenities will provide online detention for several contiguous public and private development projects. An existing turf grass detention will be retrofitted and shaped to create additional storm water capacity. A portion of Ratt Creek will be stabilized, and invasive species will be physically and chemically removed.

Project Schedule

- Status: In Progress
- Start: Summer 2021
- Completion: Summer 2023

Project Details

- Installation of a berm and water control structure
- Retrofitting and shaping of an existing turf grass detention
- Physical and chemical removal of invasive species
- Stabilization of a portion of Ratt Creek
